Comunicazione del 6 ottobre 2022

Monitoraggio del traffico dati e voce: aggiornamento alla settimana 34/2022

Con riferimento al monitoraggio del traffico dati e voce su rete fissa e mobile, avviato nell'ambito del [Tavolo Telco](#) con [Comunicazione del 3 Aprile 2020](#), si comunicano, per ciascun KPI (*Key Performance Indicator*), i dati aggiornati alla settimana 34/2022 (lunedì 22 agosto 2022 - domenica 28 agosto 2022).

Si richiama, in particolare, che, sia sulla rete fissa che mobile, sono stati definiti i seguenti KPI per il traffico dati e voce:

Traffico dati

- Intensità di traffico: picco (Gbps) nella settimana;
- Volume di traffico: somma dei volumi (TB) nella settimana.

Traffico voce

- Intensità di traffico: somma dei minuti di traffico voce nell'ora di picco della settimana;
- Volume di traffico: somma dei minuti di traffico voce nella settimana.

Per la rete fissa hanno partecipato alla rilevazione 14 operatori (circa il 98% del mercato), mentre per la rete mobile hanno partecipato 8 operatori (circa il 96% del mercato).

Nelle tabelle seguenti si riportano, in particolare, per le settimane successive alla settimana 7/2020¹, per ciascuno dei suddetti KPI, la media e la deviazione *standard* dei dati comunicati dagli operatori in termini di variazioni percentuali rispetto alla settimana 7/2020.

Per ogni settimana la media e la deviazione *standard* dei dati di traffico è calcolata, sui dati degli operatori, in modo pesato utilizzando come coefficienti di pesatura la quota percentuale di accessi (numero di SIM nel caso rete mobile) di ciascun operatore alla fine dell'anno precedente². La deviazione

¹ settimana 7: lunedì 10 febbraio - domenica 16 febbraio 2020.

² I pesi (numero di accessi/numero SIM di ciascun operatore sulla totalità di accessi/SIM dell'intero mercato) sono stati normalizzati sulla base delle consistenze complessive degli operatori che hanno comunicato settimanalmente i dati. Si evidenzia, in particolare, che per l'anno 2022:

- per la rete fissa, la totalità degli accessi a fine 2021 degli operatori che hanno comunicato le misure nell'ambito del Tavolo è pari, per quanto riguarda il traffico dati, sia per quanto concerne l'intensità di traffico che il volume, a circa

Direzione reti e servizi di comunicazioni elettroniche

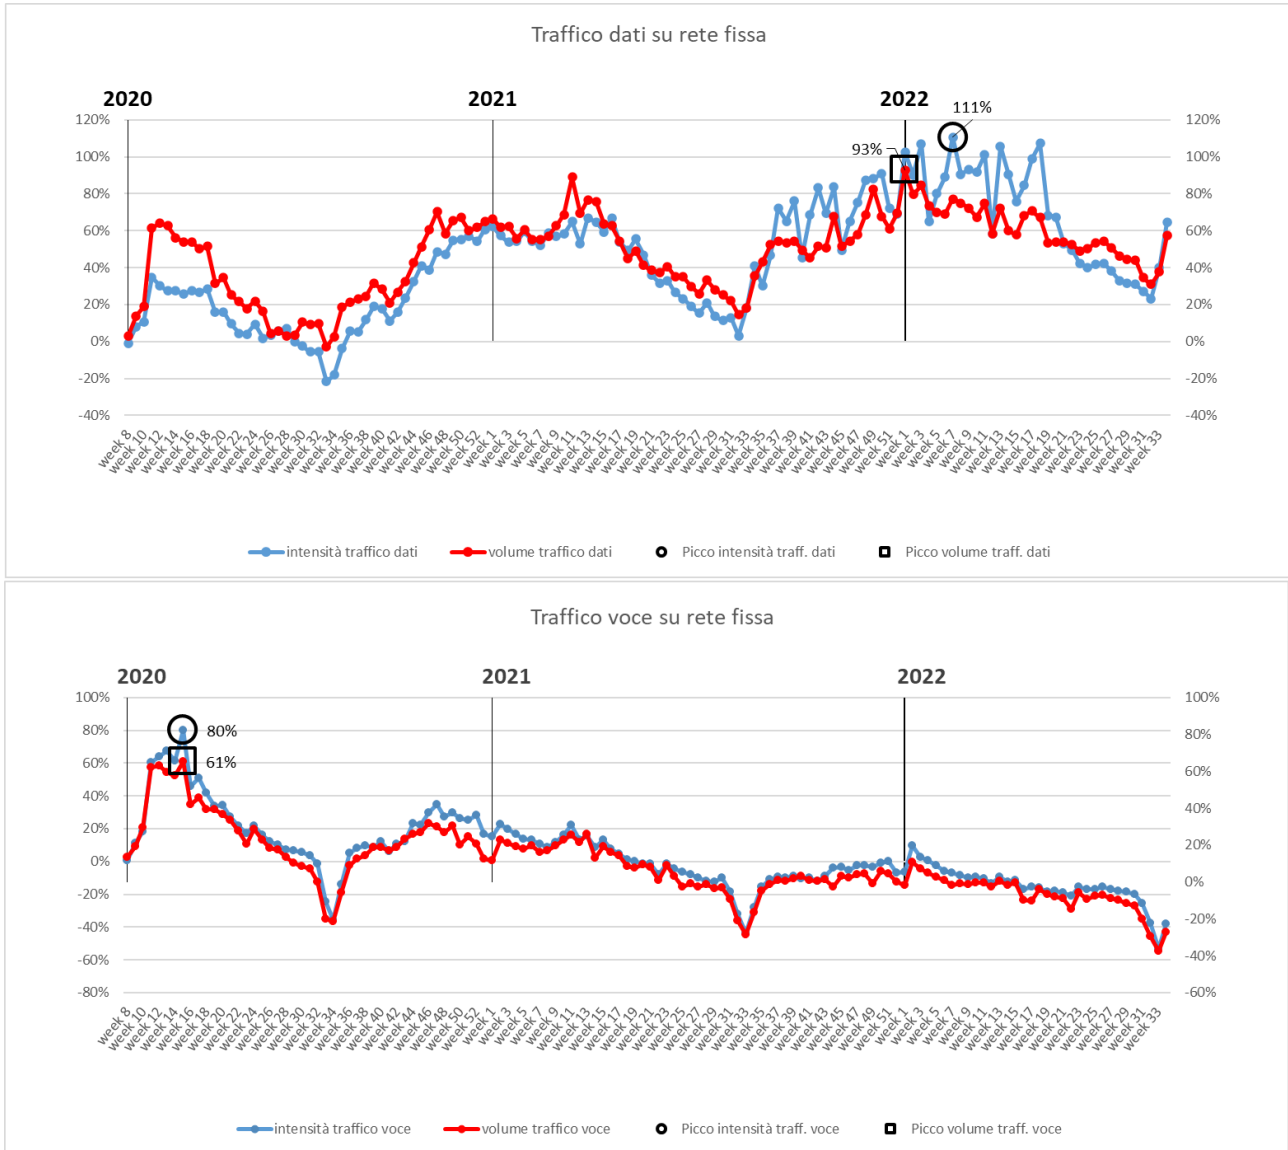

standard dà indicazione della variabilità delle comunicazioni sui dati di traffico dei singoli operatori, tenuto conto della suddetta pesatura. La somma della media e della relativa deviazione *standard* fornisce un'indicazione, pesata con le quote di mercato, del massimo incremento di traffico rispetto alla settimana 7/2020 di riferimento.

-
- il 98% dell'intero mercato, mentre per quanto riguarda il traffico voce è pari, sia per quanto concerne l'intensità di traffico che il volume, a circa il 91%;
 - per la rete mobile, la totalità delle SIM a fine 2021 degli operatori che hanno comunicato le misure nell'ambito del Tavolo è pari, per quanto riguarda il traffico dati, sia per quanto concerne l'intensità di traffico che il volume, a circa il 96% dell'intero mercato, mentre per quanto riguarda il traffico voce è pari, sia per quanto concerne l'intensità di traffico che il volume, a circa il 92%;
